## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 13, line 13 "percharge" has been replaced by ~~precharge~~.

2. This application is in condition for allowance except for the presence of claims 9-12 to an invention non-elected without traverse. Accordingly, claims 9-12 have been cancelled. ✓

3. Claims 13-18 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is that the prior art of record fails to teach the combination of externally providing a testing clock signal with a lower frequency than the main clock signal, testing a write time or a bit line precharge time, and terminating the address selection using the second clock signal in the test mode. Although various components of the claimed invention appear in the prior art, the prior art uses the components in a different manner

and structural relationship than what is specified in the claimed invention. Since the prior art further fails to suggest any independent functionality or advantage to using any individual components, it is the examiner's opinion that it would not be reasonable nor would it be suggested to a person skilled in the art to simply patch together components from the prior art to meet the limitations of the presently claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,252,820 to Nakamura discloses a memory device with a circuit for monitoring the internal control signals, but the circuit does not use a low-frequency clock signal.

U.S. Patent No. 6,104,651 to Cowles et al. discloses the use of a "tester" for testing write time, but the tester functions in a different manner from that claimed in the present invention.
